

## CTC-032 (POPs) Persistent Organic Pollutants

Statement Date: 7-9-2024

### Overview

The acronym ‘POPs’ stands for Persistent organic pollutants (POPs) which are organic substances that persist in the environment, accumulate in living organisms and pose a risk to our health and the environment.

POPs are regulated worldwide by the Stockholm Convention and the Aarhus Protocol. These international treaties are implemented in the European Union by the Regulation (EU) No 2019/1021 of the European Parliament and of the Council of 20 June 2019 on persistent organic pollutants.

### InterFET End Product Statement

InterFET Corporation sells JFET transistor products for use in many applications including commercial, industrial, and military. InterFET products, during normal use are not intended to expose any person to any POPs. For this reason, InterFET Corporation products do not include warnings related to POPs and InterFET does not make available a specific list of POPs that may be contained in our JFET products.

InterFET works closely with its suppliers and reviews their certifications and material content used during the manufacturing process. Based on this information, InterFET has determined to the best of its knowledge that certain InterFET Corporation products may not contain one or more of substances in the list. InterFET continually monitors compliance requirements while in work and upon release. If new requirements or changes in material content present a normal use exposure requiring a POPs warning, InterFET will provide the necessary warnings.

### InterFET Product Manufacturing Statement

InterFET’s JFET products are manufactured using a fabless business model whereby InterFET Corporation wafers are produced through subcontract manufacturers. InterFET works closely with its subcontract manufacturers to ensure safe water and toxic material handling practices are enforced.

InterFET Corporation updates material content information and continually monitors compliance requirements while in work and upon release. InterFET and its suppliers may consider certain information to be proprietary and, therefore, Chemical Abstracts Service numbers and other information may not be available for release.

**Disclaimer:** It is the Buyers responsibility for designing, validating and testing the end application under all field use cases and extreme use conditions. Guaranteeing the application meets required standards, regulatory compliance, and all safety and security requirements is the responsibility of the Buyer. These resources are subject to change without notice.
