

CTC-029 California Proposition 65 Statement

Statement Date: June 6, 2024

Overview

The Safe Drinking Water and Toxic Enforcement Act of 1986 (known as Proposition 65 or “Prop 65”), requires that the Governor of California revise and republish at least once per year the list of chemicals known to the State to cause cancer or reproductive toxicity. The latest publication of this list was December 29, 2023.

Prop 65 requires clear warnings to be given if a business or its suppliers knowingly exposes an individual in California to a chemical on the Prop 65 List. Prop 65 also prohibits a corporation or its suppliers from knowingly discharging a chemical on the Prop 65 List such that it is likely to, or will, enter any California drinking water source.

InterFET End Product Statement

InterFET Corporation sells JFET transistor products for use in many applications including commercial, industrial, and military. InterFET products, during normal use are not intended to expose any person to any chemical on the Prop 65 List. For this reason, InterFET Corporation products do not include warnings related to the Prop 65 list of chemicals and InterFET does not make available a specific list of Prop 65 chemicals that may be contained in our JFET products.

InterFET works closely with its suppliers and reviews their certifications and material content used during the manufacturing process. Based on this information, InterFET has determined to the best of its knowledge that certain InterFET Corporation products may contain one or more of chemicals on the Prop 65 List. If present, these chemicals are not intended to be exposed to users, nor are they intended to be released or discharged during normal product use. InterFET continually monitors compliance requirements while in work and upon release. If new requirements or changes in material content present a normal use exposure requiring a Prop 65 warning, InterFET will provide the necessary warnings.

InterFET Product Manufacturing Statement

InterFET’s JFET products are manufactured using a fabless business model whereby InterFET Corporation wafers are produced through subcontract manufacturers. InterFET works closely with its subcontract manufacturers to ensure safe water and toxic material handling practices are enforced.

InterFET Corporation updates material content information and continually monitors compliance requirements while in work and upon release. InterFET and its suppliers may consider certain information to be proprietary and, therefore, Chemical Abstracts Service numbers and other information may not be available for release.

Disclaimer: It is the Buyers responsibility for designing, validating and testing the end application under all field use cases and extreme use conditions. Guaranteeing the application meets required standards, regulatory compliance, and all safety and security requirements is the responsibility of the Buyer. These resources are subject to change without notice.
